

Pham Tuan Dat – Full Stack Developer

Phone: +84 0334836597 / Email: pdat10011@gmail.com

Portfolio: <https://tuandatdev.netlify.app> / Github: <https://github.com/Tuandat911dev>

Summary

Goal-oriented Java Backend Developer with nearly 1 year of experience in both Monolithic and Microservices architectures. I have a strong foundation in Spring Boot, JHipster, and ZK Framework, developed through enterprise projects and intensive Japanese-standard training.

Currently a Bridge Program student at HUST, I am committed to engineering excellence. Proactively mastered React, TypeScript, and Docker to deliver high-quality, fullstack-ready solutions.

Education

Hanoi University of Science and Technology (HUST)

Bridge Program, Bachelor of Electronics and Telecommunications

Hanoi, Vietnam

Dec 2025 - Present

BKACAD Academy of Technology

Associate Degree in Information Technology

Hanoi, Vietnam

May 2022 – Jul 2025

GPA: 8.6 / 10

Technical Skills

Programming Languages: Java, JavaScript & TypeScript

Framework / Platforms:

- ReactJS, Bootstrap, ZK Framework (MVVM Pattern), Ant Design
- Spring (Spring Security, Spring Data JPA, Springboot), Jhipster

Database Management Systems: PostgreSQL, MySQL

Tools & Infrastructure: Docker, Git (GitHub/GitLab), Postman

Architectures: Microservices, Monolithic, RESTful APIs

Professional Experience

BACH KHOA T&T / Back-end Developer Intern

Jun 2024 – Jan 2025

Project: DoWork (10 members, 7 front-end, 3 back-end)

Link: <https://dowork.vn>

Role: Back-end developer

Technologies

- Front-end: React + TypeScript + Ant Design
- Back-end: Java Spring Boot
- Architecture: Microservices
- Messaging & Middleware: RabbitMQ, Redis (Caching)
- Database: PostgreSQL

Description

- A comprehensive enterprise resource planning (ERP) and project management platform designed to optimize workflow transparency and employee productivity. The system integrates real-time timekeeping, task management, and team collaboration tools into a single unified workspace, helping organizations monitor project lifecycles from initiation to completion.

Responsibilities

- **Advanced Session Management:** Designed and implemented a multi-device session management system. Leveraged Redis Blacklist to store revoked JWTs, enabling "Remote Logout" functionality across different devices by intercepting requests through a custom Security Filter.
- **External Authentication (OAuth2):** Integrated Google and Facebook Social Login using OAuth2 Resource Server and OAuth2 Client, ensuring secure and seamless user identity verification via third-party Authentication Servers.

- **Performance Optimization (Caching):** Engineered a high-performance user-info retrieval flow by implementing Redis Caching. Reduced database load and latency by bypassing PostgreSQL queries for frequently accessed user profiles.
- **Secure Password Recovery:** Developed a robust "Forgot Password" workflow using unique, time-sensitive tokens sent via email. Implemented secure redirection and token validation logic to ensure data integrity during the password reset process.
- **Automated Scheduling (Cronjobs):** Implemented automated email notification systems using Spring Scheduling (Cronjobs) to trigger and distribute internal reports and department-wide communications at pre-defined intervals.
- **Query Optimization:** Optimized data retrieval by implementing Join Fetch and EntityGraph to resolve the N+1 select problem, significantly reducing database round-trips.
- **Dynamic Filtering:** Developed a flexible search system using JpaSpecificationExecutor, building dynamic queries with Criteria API (Predicates) to handle complex user filters.

Project: Estics (3 members, 3 back-end)

Role: Team Lead / Back-end developer

Technologies

- Spring Boot, Spring Data JPA, Spring Security, PostgreSQL, ZK Framework (MVVM), GitLab, Maven.

Description

- A simulated news aggregation system developed during an intensive internal training program to master team collaboration, Git workflows, and the MVVM architectural pattern.

Responsibilities

- **Leadership:** Acted as Team Lead for a 3-member backend group; managed project milestones, conducted code reviews, and coordinated workflows on GitLab to ensure seamless integration.
- **Security Architecture:** Designed and implemented a Role-Based & Permission-Based authorization model using Spring Security to simulate complex content approval workflows.
- **Database Design:** Architected the relational database schema in PostgreSQL and utilized Spring Data JPA for efficient data persistence and relationship management.
- **Authentication & Logic:** Developed secure core modules for user registration, encrypted login, and session management.

KIAISOFT VIET NAM / Fullstack Developer Intern (Intensive Training)

Feb 2025 – Jun 2025

- **Standardized Development Workflow:** Completed an intensive software development training program following Japanese enterprise standards, mastering professional Git Flow with 6 branches (Main, Dev, Hotfix, Release, Feature, Bugfix).
- **Backend Mastery:** Solidified foundations in Java Core, database design, and SQL optimization. Gained deep understanding of performance tuning by resolving the N+1 select problem.
- **Enterprise Architecture:** Developed robust applications using MVC patterns and built scalable RESTful APIs leveraging the Spring Framework.
- **Modern Frontend & UI:** Mastered modern frontend technologies including HTML, CSS, JavaScript, and TypeScript integrated with ReactJS and Ant Design UI library.
- **DevOps & Infrastructure:** Gained hands-on experience in containerization using Docker, ensuring consistency across development and deployment environments.
- **Quality Mindset:** Trained in professional development standards, including code reviews, clean code principles, and strict adherence to project specifications.

Personal Project

Project: Trendora (2 members: 1 fullstack developer, 1 back end developer)

Git: <https://gitlab.com/trendora>

Link: <https://trendora-fashion.netlify.app>

Role: Fullstack Developer

Technologies

- Front-end: Vue 3 + Element Plus, Pinia
- Back-end: Java Spring Boot
- Architecture: Monolithic
- Database: MySQL

Description

- A comprehensive full-stack e-commerce platform for fashion retail, integrating an intuitive online shopping experience with a robust back-office management system. The application features a sophisticated relational architecture with nearly 40 database entities, designed to handle intricate business workflows such as multi-level product categorization, real-time stock tracking, and dynamic promotion logic.

Responsibilities

- **Advanced Security & Session Management:** Implemented multi-device session tracking and anti-spam order protection by requiring mandatory email verification for every transaction.
- **Guest Access via Temporary JWT:** Engineered a secure "Guest Order Tracking" flow. Guests can access their orders via Email OTP, which triggers a temporary JWT for authorized viewing, ensuring data privacy without requiring full account registration.
- **High-Performance Caching:** Utilized Caffeine Cache to manage short-lived OTP tokens in-memory, significantly reducing database I/O and enhancing system responsiveness.
- **Complex Data Modeling:** Architected a comprehensive schema with nearly 40 entities, covering intricate relationships between inventory, multi-variant products, and dynamic promotional logic.
- **Full-stack Execution:** Developed the entire lifecycle from secure RESTful APIs to a reactive ReactJS frontend, managing complex application states and secure data flows.
- **Secure Payment & Auth Integration:** Successfully integrated VNPAY E-wallet for secure online transactions and Google OAuth2 for seamless user authentication.
